Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently amended) An elastic composite article having a width, and a length greater than the width of the article, the article comprising:

a nonwoven fibrous first coverweb comprising a down-web direction aligned with the length of the article and a cross-web direction transverse to the down-web direction;

a tear pattern in the form of a plurality of separate and distinct weakened areas formed in the first coverweb, wherein the weakened areas comprise perforations formed through the first coverweb;

a second coverweb attached to the first coverweb;

a plurality of elastic filaments located between the first coverweb and the second coverweb, the plurality of elastic filaments aligned along the length of the article, wherein all of the elastic filaments located between the first coverweb and the second coverweb extend continuously over the entire length of the article.

2. (Original) An article according to claim 1, wherein the article is free of any woven or knitted webs.

3. (Original) An article according to claim 1, wherein the second coverweb comprises a nonwoven fibrous web, and wherein the elastic composite article comprises binder impregnating the first coverweb and the second coverweb.

4. (Original) An article according to claim 3, wherein the binder comprises cohesive binder material, wherein the elastic composite article comprises a cohesive elastic composite article.

5. (Original) An article according to claim 1, wherein the second coverweb is free of any tear pattern comprising a plurality of separate and distinct weakened areas.

6. (Original) An article according to claim 1, wherein the weakened areas comprise embossed areas.

7. (Canceled)

8. (Original) An article according to claim 1, wherein the tear pattern comprises a plurality of rows of the weakened areas, wherein each row of the plurality of rows extends in the cross-web direction across the first coverweb, and wherein the rows are distributed along the down-web direction of the first coverweb.

9. (Original) An article according to claim 1, wherein, within the plurality of weakened areas, the weakened areas located adjacent each other across the cross-web direction of the first coverweb are separated by a land, and further wherein the ratio of a cross-web width of one of the adjacent weakened areas to a cross-web width of the land between the adjacent weakened areas is 1:1 or higher.

10. (Original) An article according to claim 1, wherein, within the plurality of weakened areas, the weakened areas located adjacent each other across the cross-web direction of the first coverweb are separated by a land, and further wherein the ratio of a cross-web width of one of the adjacent weakened areas to a cross-web width of the land between the adjacent weakened areas is 1.5:1 or higher.

11. (Original) An article according to claim 1, further comprising a pressure sensitive adhesive on at least one major surface of the elastic composite article.

12. (Original) An article according to claim 1, wherein the second coverweb comprises a nonwoven fibrous coverweb comprising a down-web direction aligned with the length of the article and a cross-web direction transverse to the down-web direction, and wherein the second coverweb further comprises a tear pattern in the form of a plurality of separate and distinct weakened areas formed in the second coverweb.

-4-

13. (Previously Presented) An elastic composite article having a width, and a length greater than the width of the article, the article comprising:

a nonwoven fibrous first coverweb comprising a down-web direction aligned with the length of the article and a cross-web direction transverse to the down-web direction;

a tear pattern in the form of a plurality of separate and distinct weakened areas formed in the first coverweb;

a second coverweb attached to the first coverweb, wherein the second coverweb comprises a nonwoven fibrous coverweb comprising a down-web direction aligned with the length of the article and a cross-web direction transverse to the down-web direction, and wherein the second coverweb further comprises a tear pattern in the form of a plurality of separate and distinct weakened areas formed in the second coverweb, wherein the weakened areas of the first coverweb are not aligned with the weakened areas of the second coverweb;

a plurality of elastic filaments located between the first coverweb and the second coverweb, the plurality of elastic filaments aligned along the length of the article, wherein each elastic filament of the plurality of elastic filaments extends continuously over the entire length of the article.

14. (Previously Presented) An article according to claim 13, wherein the weakened areas comprise embossed areas.

15. (Previously Presented) An article according to claim 13, wherein the weakened areas comprise perforations formed through the second coverweb.

16. (Previously Presented) An article according to claim 13, wherein the tear pattern in the second coverweb comprises a plurality of rows of the weakened areas, wherein each row of the plurality of rows extends in the cross-web direction across the second coverweb, and wherein the rows are distributed along the down-web direction of the second coverweb.

17. (Previously Presented) An article according to claim 13, wherein the first coverweb and the second coverweb are substantially identical.

-5-

18. (Currently amended) An elastic composite article having a width and a length greater than the width of the article, the article comprising:

a nonwoven fibrous first coverweb comprising a down-web direction aligned with the length of the article and a cross-web direction transverse to the down-web direction;

a tear pattern in the form of a plurality of separate and distinct weakened areas formed in the first coverweb, wherein the tear pattern comprises a plurality of rows of the weakened areas distributed along the down-web direction of the first coverweb, wherein each row of the weakened areas extends in the cross-web direction across the first coverweb, and wherein the weakened areas comprise perforations formed through the first coverweb;

a nonwoven fibrous second coverweb;

a plurality of elastic filaments extending in a direction along the length of the article, the plurality of elastic filaments located between the first coverweb and the second coverweb, wherein all of the elastic filaments located between the first coverweb and the second coverweb extend continuously over the entire length of the article; and

binder impregnating the first coverweb and the second coverweb;
wherein the article is free of any woven or knitted webs.

19-43. (Canceled)

44. (Previously Presented) An article according to claim 13, wherein the article is free of any woven or knitted webs.

45. (Previously Presented) An article according to claim 13, wherein the elastic composite article comprises binder impregnating the first coverweb and the second coverweb.

46. (Previously Presented) An article according to claim 45, wherein the binder comprises cohesive binder material, wherein the elastic composite article comprises a cohesive elastic composite article.

-6-

47. (Previously Presented) An article according to claim 13, wherein the tear pattern comprises a plurality of rows of the weakened areas, wherein each row of the plurality of rows extends in the cross-web direction across the first coverweb, and wherein the rows are distributed along the down-web direction of the first coverweb.

48. (Previously Presented) An article according to claim 13, wherein, within the plurality of weakened areas, the weakened areas located adjacent each other across the cross-web direction of the first coverweb are separated by a land, and further wherein the ratio of a cross-web width of one of the adjacent weakened areas to a cross-web width of the land between the adjacent weakened areas is 1:1 or higher.

49. (Previously Presented) An article according to claim 13, wherein, within the plurality of weakened areas, the weakened areas located adjacent each other across the cross-web direction of the first coverweb are separated by a land, and further wherein the ratio of a cross-web width of one of the adjacent weakened areas to a cross-web width of the land between the adjacent weakened areas is 1.5:1 or higher.

50. (Previously Presented) An article according to claim 13, further comprising a pressure sensitive adhesive on at least one major surface of the elastic composite article.

51. (Previously Presented) An article according to claim 18, wherein the article is free of any woven or knitted webs.

52. (Previously Presented) An article according to claim 18, wherein the binder comprises cohesive binder material, wherein the elastic composite article comprises a cohesive elastic composite article.

53. (Previously Presented) An article according to claim 18, wherein the second coverweb is free of any tear pattern comprising a plurality of separate and distinct weakened areas.

-7-

54. (Previously Presented) An article according to claim 18, wherein the weakened areas comprise embossed areas.

55. (Canceled)

56. (Previously Presented) An article according to claim 18, wherein the tear pattern comprises a plurality of rows of the weakened areas, wherein each row of the plurality of rows extends in the cross-web direction across the first coverweb, and wherein the rows are distributed along the down-web direction of the first coverweb.

57. (Previously Presented) An article according to claim 18, wherein, within the plurality of weakened areas, the weakened areas located adjacent each other across the cross-web direction of the first coverweb are separated by a land, and further wherein the ratio of a cross-web width of one of the adjacent weakened areas to a cross-web width of the land between the adjacent weakened areas is 1:1 or higher.

58. (Previously Presented) An article according to claim 18, wherein, within the plurality of weakened areas, the weakened areas located adjacent each other across the cross-web direction of the first coverweb are separated by a land, and further wherein the ratio of a cross-web width of one of the adjacent weakened areas to a cross-web width of the land between the adjacent weakened areas is 1.5:1 or higher.

59. (Previously Presented) An article according to claim 18, further comprising a pressure sensitive adhesive on at least one major surface of the elastic composite article.

60. (Previously Presented) An article according to claim 18, wherein the second coverweb comprises a down-web direction aligned with the length of the article and a cross-web direction transverse to the down-web direction, and wherein the second coverweb further comprises a tear pattern in the form of a plurality of separate and distinct weakened areas formed in the second coverweb.
